The figure is a map with a blue line representing a path or boundary. The x-axis is labeled 'Longitude' and ranges from -83.76 to -83.62. The path starts at point 'A' (red) on the right and ends at point 'B' (green) on the left. The path is mostly horizontal, with some vertical segments and a small loop on the left side. The background shows a landscape with various features like roads and fields.

A

```

A contour plot illustrating a path optimization problem. The horizontal axis represents longitude, ranging from -83.62 to -83.55. The vertical axis represents latitude, ranging from 0.00 to 0.07. The plot displays several light gray contour lines representing different levels of a cost function. A thick blue line indicates the optimal path, starting at point A (marked with a red dot) near (-83.57, 0.01) and ending at point B (marked with a green dot) near (-83.615, 0.06). The path follows the contours, generally moving towards higher values of the cost function.

Longitude

The map displays the study area with the coastline on the left and the offshore wind farm (OWF) in the center. Two transects are marked: Transect A (red line) and Transect B (green line). Transect A is located near the coastline, while Transect B is located further offshore. The map also shows the location of the OWF and the surrounding bathymetry.
